ABOUT

**Where improvements meet imagination. Reimagine.
Redesign. Reinvent**

Join us for an exciting and creativity-driven event — Vibe Coding Hackathon 2025, hosted by the Department of Information Technology. This hackathon is the ultimate platform for coders, designers, and innovators from all departments to come together, collaborate, and bring fresh ideas to life. Unlike traditional hackathons, participants will clone a pre-built website or app and enhance it by adding new features, designs, or functionalities of their own choice.

Whether it's a smarter UI, an extra page, or a next-level integration — your creativity defines the limit! Showcase your talent and demonstrate your technical and problem-solving abilities in a fun, competitive environment. Boost Your Portfolio: Add your improved projects to your portfolio and strengthen your resume with real, hands-on experience.

Enjoy the Experience: Dive into the excitement of enhancing real-world applications and enjoy a day filled with innovation, collaboration, and pure coding vibes!

GENERAL RULES

- Prior coding experience is not mandatory; however, having basic knowledge of programming or design is recommended.
- Participants must register in teams of **2-4 members**. Pre-registration is mandatory to participate in the Vibe Coding Hackathon.
- The base project (website or app) will be provided by the organizers on the day of the event.
- Teams must clone the given project and enhance it by adding new features, designs, or functionalities of their choice.
- Each team should ensure that their enhancements are original and developed during the hackathon period.
- Participation Certificates will be awarded to all participants. Exciting Prizes will be given to the best and most innovative teams.
- **Entry Fee: ₹100** per participant.
- Registration can be completed online through website or in person through our event coordination team or via the official Instagram page:
@Curiosity_vivekcollege

EVENT RULES

- The base project (website or app) will be provided to all participants on the first day of the event.
- Teams must clone the given project and enhance it by adding new features, design improvements, or creative functionalities based on their own innovative ideas.
- Participants are allowed to use any programming language, framework, or tool of their choice to implement their features.
- The event will be conducted over two days:
 - Day 1: Full project implementation and feature development.**
 - Day 2: Final refinement, presentation, and judging session.**
- The event will start at **9:00 AM** on both days.
- Lunch and refreshment breaks will be provided as scheduled.

- Teams must submit their enhanced project before the submission deadline announced by the coordinators.
- No sharing of code or resources between teams is allowed.
- Any such activity will lead to disqualification. Internet usage is permitted only for research, documentation, and learning purposes — not for using pre-built projects or templates.
- Each team must be ready to demonstrate and explain the features they implemented during the final judging round.
- All decisions made by the judging panel will be final and binding

SUBMISSION RULES

- Each team must submit the enhanced version of the given project (website or app) along with the source code in the specified submission repository or Google Drive link provided by the organizers.
- A brief documentation file must be included, explaining: The new feature(s) added or improvements made.
- The purpose and functionality of the enhancement. Steps or instructions required to run and test the new feature.
- Teams are encouraged to prepare a live presentation or short demo video showcasing their feature implementation and how it improves the base project.
- The enhanced project must be functional and stable, even if it's not a complete version.
- All submissions must be completed before the deadline announced by the event coordinators.
- Late submissions will not be considered for evaluation.
- Each team should ensure that all modifications are original and developed during the hackathon period.
- Any use of pre-built templates or copied code without proper modification may lead to disqualification

JUDGING CRITERIA

Creativity & Originality:

The project will be evaluated based on how unique, innovative, and impactful the new feature or enhancement is compared to the original version of the app or website.

Relevance & Practicality: Judges will assess how well the added feature aligns with the purpose of the given project and how practical or beneficial it would be for real users.

Technical Execution:

Evaluation will include the quality of coding, integration of the new feature, performance, and how seamlessly it fits into the existing system.

UI/UX Enhancement:

Points will be awarded for design improvements, user interface upgrades, responsiveness, and overall user experience.

The background of the slide is a dark, textured surface covered with a dense pattern of colorful, semi-transparent geometric shapes. These shapes include squares, circles, and irregular polygons in shades of blue, green, yellow, and red. Some shapes have internal patterns or are outlined, creating a complex, layered visual effect.

Presentation & Explanation:

Teams must clearly present their enhancements, explain their purpose, and demonstrate the functionality during the judging round.

Team Collaboration:

The level of teamwork, communication, and balanced participation among team members will also be considered.

Decision of Judges:

The decision of the judging panel will be final and binding for all participants.
